

Grand-tek Technology Conflict Minerals Declaration

In order to bring sustainably development to the company, we focused on the long-term contribution to the community and the society. We will always following the latest environmental friendly regulation and aiming to bring a better world for our future generations.

The proceeds from harmful social and environmental practices in mines, i.e. Democratic Republic of Congo (DRC), have been used to fuel armed conflict in the region. We, GTT, refuse to bring any positive effects to this scenario. This is a major concern to the electronics industry, among others. The recently enacted Dodd Frank law in the United States defines conflict minerals as Tin, Tungsten, Tantalum and Gold (3TG) and any derivatives thereof. We will take related measures to avoid using Conflict Minerals mentioned above.

GTT will continue to monitor the use of Conflict Minerals so as to reduce its impact.

Quality Manager

Richard, Yu

A handwritten signature in black ink that reads "Richard". The signature is written in a cursive style and is positioned above a horizontal line.
